

The Eora MRIO tables

*Manfred Lenzen, Keiichiro Kanemoto, Daniel
Moran, Arne Geschke
ISA, The University of Sydney
Australia*

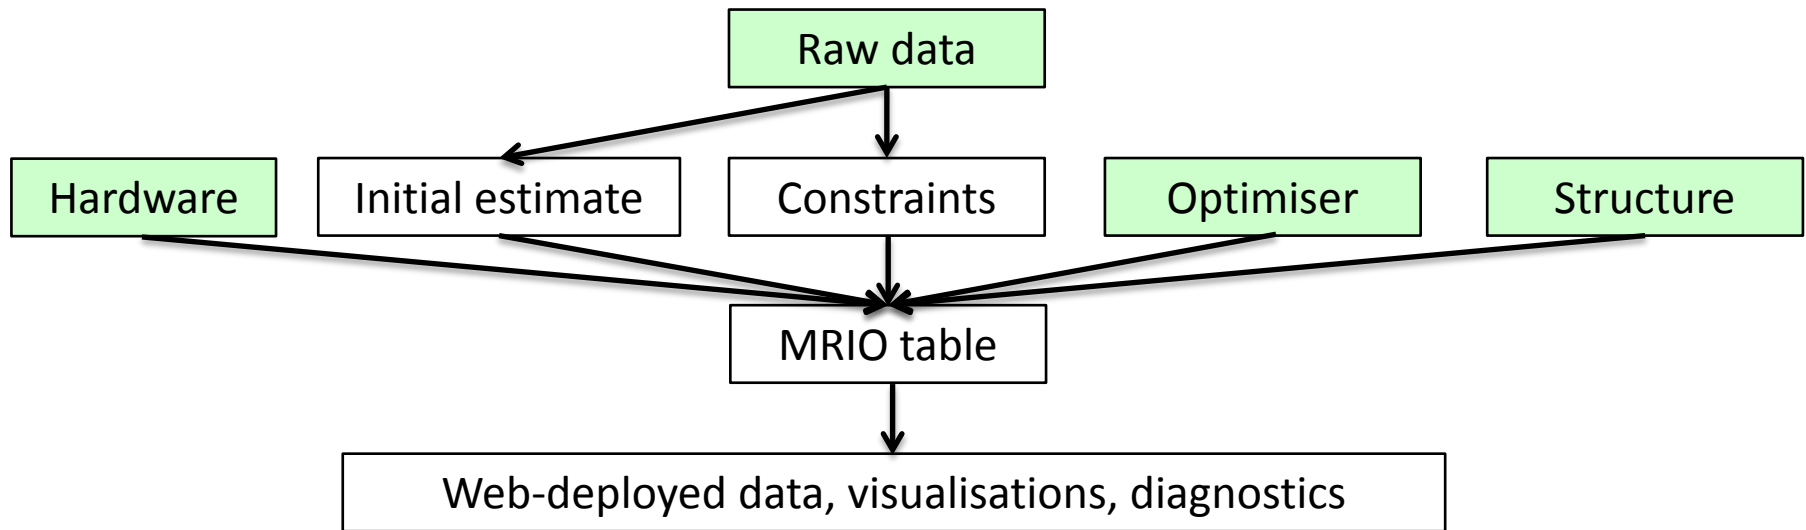

Guiding principles

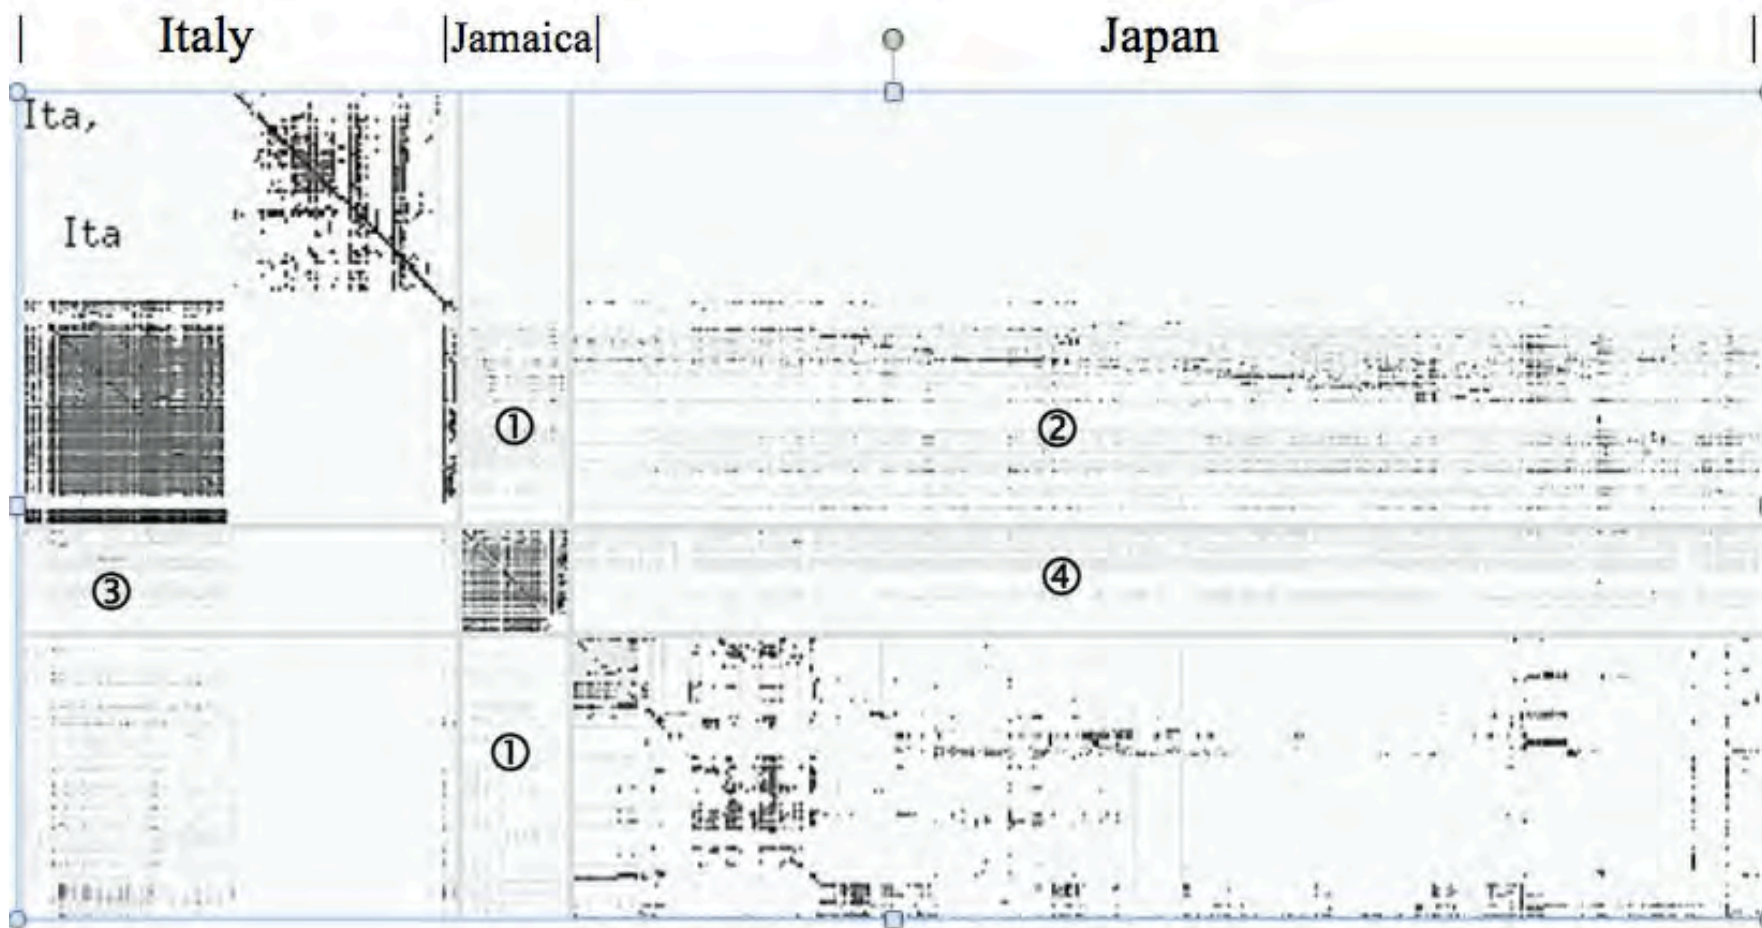

- Detail: 187 countries, 15000 sectors → LCA and footprint
- Dynamics: Time series 1990-2009 → trends and scenarios
- Flexibility: Basic prices, margins and taxes
- Transparency: Close adherence to the raw data
- Uncertainty: Standard deviation estimates → decision-making
- Reliability: Info on constraint violations → quality assurance
- Timeliness: Delay of 2 years
- Budget: 12 person-years initially, < 2 person-years /y continually;
- Openness: Public, free availability for research

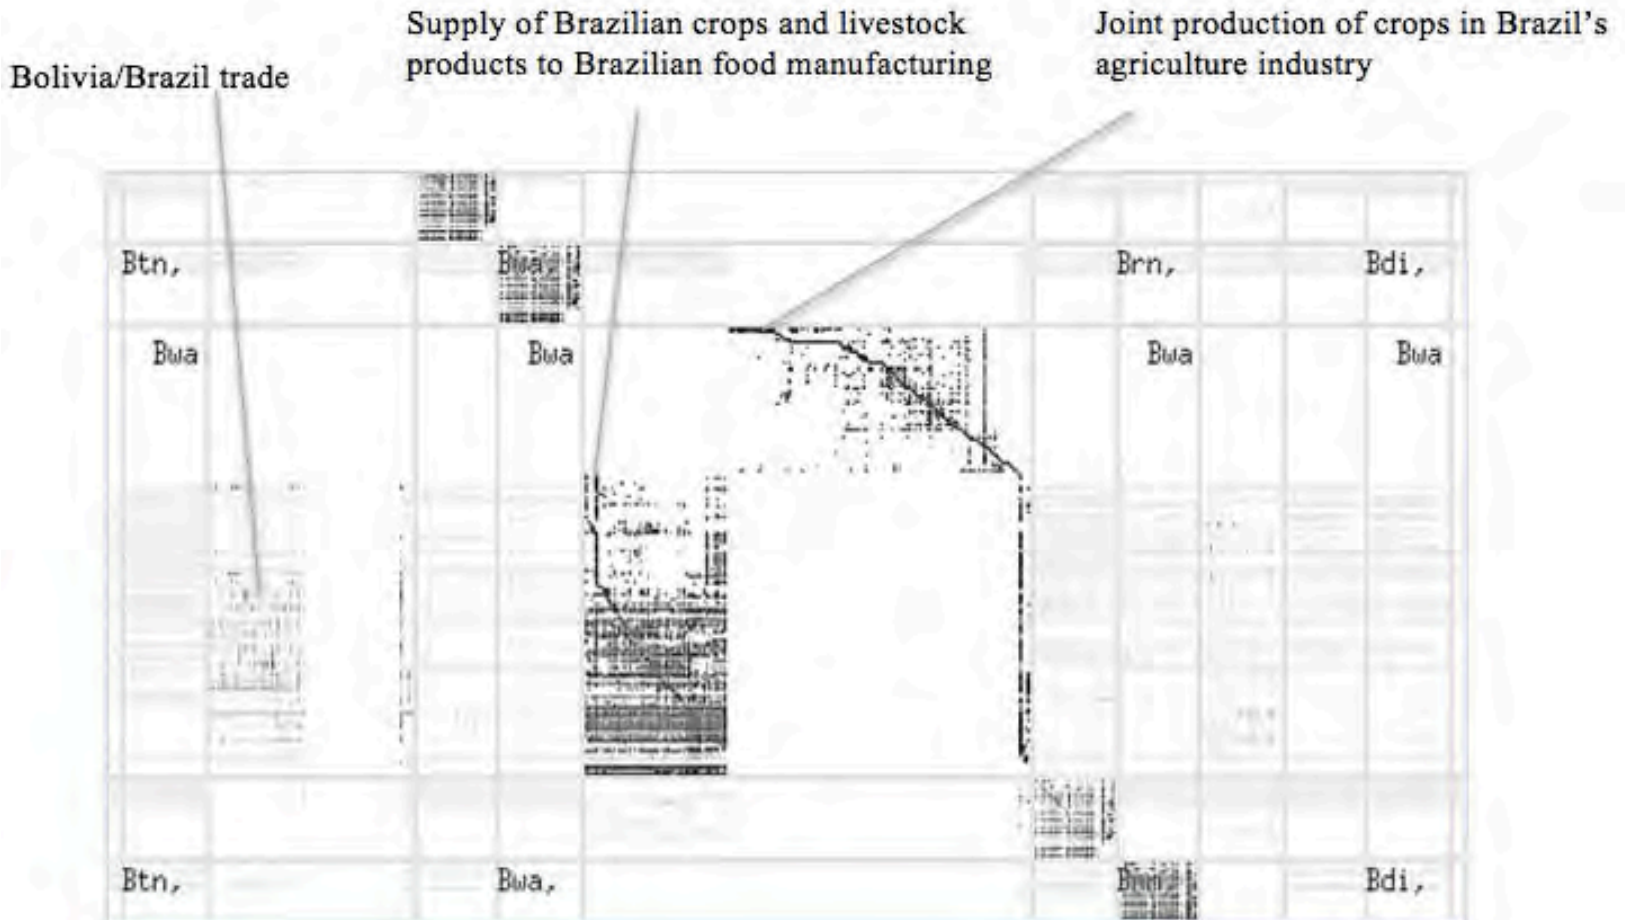

Conceptual framework

Structure

Original sectors – rectangular matrices

Hardware

Design considerations

- Number and speed of CPUs
- RAM vs disk storage
- Data type
- Sparsity
- Multithreading
- Scheduling
- Communication overheads
- Shared vs distributed memory

Raw data

Input-output tables from 74 national statistical offices,
Input-output data from Eurostat, IDE-JETRO and OECD,
UN National Accounts Main Aggregates Database,
UN National Accounts Official Data,
UN Comtrade international trade database
UN Servicetrade international trade database

Initial estimate

$$T_{ij}^{ss(v)} = \frac{\tilde{T}_{ij}^{ss(v)}}{\tilde{T}_{..}^{ss(pu)}} \frac{T_{..}^{ss(pu),OC}}{v_{..}^{ss(ba),OC}} v_{..}^{ss(ba),MA} = \underbrace{\frac{\tilde{T}_{ij}^{ss(v)}}{\tilde{T}_{..}^{ss(pu)}}}_{\text{sector structure and valuation scaling}} \underbrace{\left(\frac{x_{..}^{ss(ba),OC}}{v_{..}^{ss(ba),OC}} - 1 \right)}_{\text{magnitude}} v_{..}^{ss(ba),MA}$$

Oosterhaven, Stelder & Inomata
ESR 2008

$$y_{ik}^{ss(v)} = \underbrace{\frac{\tilde{y}_{ik}^{ss(v)}}{\tilde{y}_{..}^{ss(pu)}}}_{\text{supply structure and valuation scaling}} \underbrace{\frac{y_{..}^{ss(pu),OC}}{y_{..}^{ss(pu),OC}}}_{\text{use structure}} \underbrace{y_{..}^{ss(pu),MA}}_{\text{magnitude}}$$

Bouwmeester & Oosterhaven
IO Seville 2008

$$v_{lj}^{ss(ba)} = \underbrace{\frac{\tilde{v}_{lj}^{ss(ba)}}{\tilde{v}_{..}^{ss(ba)}}}_{\text{use structure}} \underbrace{\frac{v_{..}^{ss(ba),OC}}{v_{..}^{ss(ba),OC}}}_{\text{supply structure}} \underbrace{v_{..}^{ss(ba),MA}}_{\text{magnitude}}$$

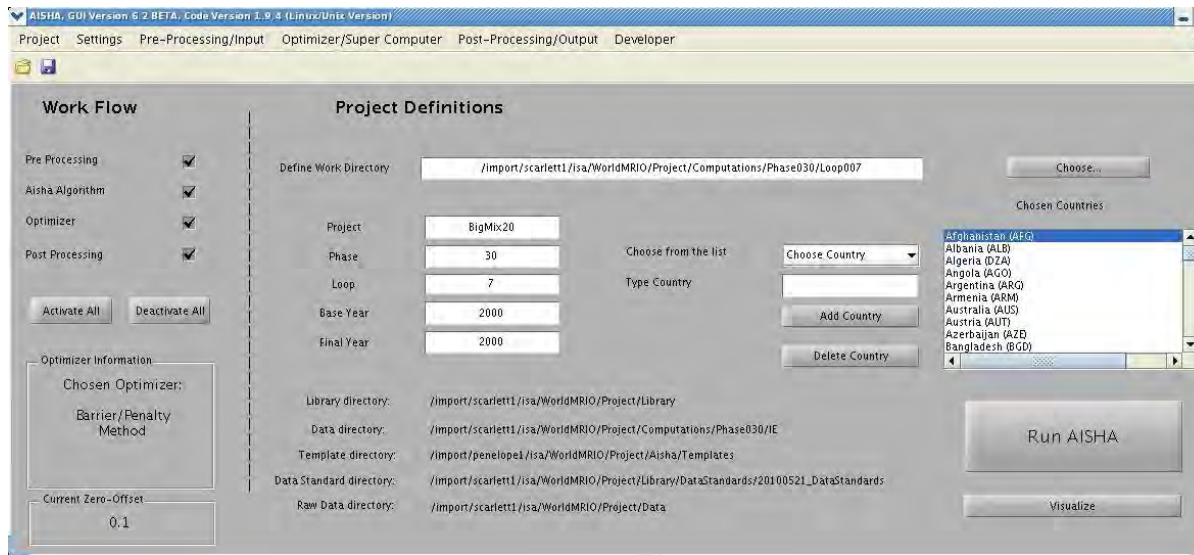

Tukker *et al*
Ecol.Econ. 2009

$$V_{ij}^{ss(ba)} = \underbrace{\frac{\tilde{v}_{ij}^{ss(ba)}}{\tilde{v}_{..}^{ss(ba)}}}_{\text{matrix structure}} \underbrace{\frac{x_{..}^{ss(ba),OC}}{v_{..}^{ss(ba),OC}}}_{\text{magnitude}} v_{..}^{ss(ba),MA} ,$$

Optimiser

$$\mathbf{p} = \begin{pmatrix} \mathbf{a} \\ \boldsymbol{\varepsilon} \end{pmatrix} \sim D \left[\begin{pmatrix} \mathbf{a}_0 \\ 0 \end{pmatrix}, \begin{pmatrix} \boldsymbol{\Sigma}_a \\ \boldsymbol{\Sigma}_c \end{pmatrix} \right] = D[\mathbf{p}_0, \boldsymbol{\Sigma}]$$

Minimise $f = (\mathbf{p} - \mathbf{p}_0)' \hat{\boldsymbol{\Sigma}}^{-1} (\mathbf{p} - \mathbf{p}_0)$, subject to $\mathbf{C} \mathbf{p} = \mathbf{c}$

$$\mathcal{L} = (\mathbf{p} - \mathbf{p}_0)' \hat{\boldsymbol{\Sigma}}^{-1} (\mathbf{a} - \mathbf{a}_0) + \lambda (\mathbf{C} \mathbf{p} - \mathbf{c})$$

$$\sigma_{c,i} = \sqrt{\sum_j (G_{ij} \sigma_{p,j})^2} \quad \forall i$$

Data quality
View size distributions of MRIO elements, reports on adherence to published data sources, and data quality assessments

The Eora MRIO Database

The Eora multi-region IO database provides a time series of high resolution input-output (IO) tables with matching environmental and social satellite accounts for 187 countries. The Eora MRIO features:

- 187 individual countries represented by a total of 15,909 sectors
- continuous coverage for the period 1990-2009
- 35 types of environmental indicators covering air pollution, greenhouse gas emissions, water use, Ecological Footprint, and Human Appropriation of Net Primary Productivity
- high-resolution heterogeneous classification, or 25-sector harmonized classification
- raw data drawn from the UN's System of National Accounts and COMTRADE databases, Eurostat, IDE/JETRO, and numerous national agencies
- distinction between basic prices and purchasers' prices through 5 mark-ups, and
- reliability statistics (estimate of standard deviation) for all results

The Eora database is under continuing development. Please contact us with your requests, comments, and questions: isa@physics.usyd.edu.au

UK in 'delusion' over emissions

Is the UK deluded over its claim to be cutting greenhouse gases?

02.26

05.30

The UK has been deluded over its claim to be cutting greenhouse gases, according to two reports that will shake the climate change debate. Dr John Barrett, from the Stockholm Environment Institute at the University of York who wrote the report, and environment minister Phil Woolas discuss the report.

Carbon footprint of the UK
